CLARA

Cross-layer assisted resource allocation

Benno Zerlin

Vollständiger Abdruck der von der Fakultät für Elektrotechnik und Informationstechnik der Technischen Universität München zur Erlangung des akademischen Grades eines

Doktor-Ingenieurs

genehmigten Dissertation.

Vorsitzender: Univ.-Prof. Dr.-Ing. Jörg Eberspächer

Prüfer der Dissertation:

1. Univ.-Prof. Dr. techn. Josef A. Nossek
2. Univ.-Prof. Dr. rer. nat. Rudolf Mathar
Rheinisch-Westfälische Technische Hochschule Aachen

Die Dissertation wurde am 06.02.2006 bei der Technischen Universität München eingereicht und durch die Fakultät für Elektrotechnik und Informationstechnik am 12.06.2006 angenommen.

Berichte aus dem Lehrstuhl für Netzwerktheorie und
Signalverarbeitung der Technischen Universität München

Acknowledgments

I would like to thank Professor Josef A. Nossek, Professor Wolfgang Utschick, Professor Jörg Eberspächer, Professor Rudolf Mathar, Professor Ryuji Kohno and Professor Paulo Diniz for the roles they played in the accrument of this work.

This thesis was rendered possible through the contributions of the research group including Dr. Michael Joham, Dr. Michel Ivrlač, Dr. Rainer Pauli, Johannes Brehmer, Peter Breun, Mario Castañeda, Guido Dietl, Frank Dietrich, Christoph Saas, Pedro Tejera and Dirk Waldhauser.

Contents

1. Introduction	1
1.1 Motivation	1
1.2 Overview and contributions	3
1.3 Notation and assumptions	4
2. Generic derivation of CLARA	7
2.1 Propositions	8
2.2 Conditioned Optimization	11
2.3 General Cross-layer optimization	12
2.3.1 Iterative solution	13
2.3.2 Convergence	13
3. CLARA in HSDPA systems	17
3.1 Cross-layer system model	19
3.1.1 CDMA channel	20
3.1.2 FEC code	25
3.1.3 Protocol	27
3.1.4 Scheduling	30
3.2 Cross-layer optimization	35
3.2.1 Decoupled equivalent problems	36
3.2.2 Mode optimization	38
3.2.3 Power control	39
3.3 Cross-layer assisted scheduling	41
3.3.1 Time domain scheduling	41
3.3.2 Time and code domain scheduling	43
3.4 Evaluation	44
3.4.1 QoS Compliance	44
3.4.2 Power Advantage	45
3.4.3 Capacity Increase	47
4. Extension to MISO systems	49
4.1 MISO strategies	50
4.1.1 MISO system model	51
4.1.1.1 Signal model	52

4.1.1.2	SINR and outage probability	55
4.1.2	Covariance based linear precoding	58
4.1.2.1	Covariance signal model	59
4.1.2.2	Linear precoding solutions	62
4.1.3	SINR balancing	65
4.1.4	Evaluation	66
4.2	Cross-layer optimization	70
4.2.1	Cross-layer system model	71
4.2.2	Equivalent requirements	73
4.2.3	Mode selection	74
4.2.4	Transmit processing	76
4.2.4.1	Spatio-temporal downlink processing	76
4.2.4.2	Downlink power control	76
4.3	Cross-layer assisted scheduling	79
4.3.1	Time and code domain scheduling	80
4.3.2	Joint scheduling in space, time and code domain	81
4.4	Evaluation	82
4.4.1	QoS compliance	84
4.4.2	Power advantage	85
4.4.3	Capacity increase	87
5.	Conclusion	91
5.1	Recapitulation	91
5.1.1	Achievements	91
5.1.2	Applicability	93
5.1.2.1	System modeling and evaluation	93
5.1.2.2	Top-down resource allocation	94
5.1.2.3	Linear precoding for HSDPA	94
5.2	Outlook	94
5.2.1	CLARA in 2G systems	94
5.2.2	Extension to MIMO systems	96
5.2.3	Investigation of interconnections to bottom-up schemes	98
	Appendix	101
A1	Introduction to HSDPA	101
A2	On the channel outage probability	102
A2.1	SISO systems	103
A2.2	MISO systems	105
A3	On the density functions of channel gains	110
A4	On the derivation of linear precoders	113
A4.1	Transmit Matched Filter (TxMF)	113
A4.2	Transmit Zero-Forcing Filter (TxZF)	114
A4.3	Transmit Wiener Filter (TxWF)	115
	Bibliography	117
