

Foamed Styrene-in-Water Emulsions as Template for Highly Ordered Polystyrene Foams

Von der Fakultät Chemie der Universität Stuttgart
zur Erlangung der Würde eines Doktors der
Naturwissenschaften (Dr. rer. nat.) genehmigte Ahandlung

Vorgelegt von

Jonas Elsing
aus Paderborn

Hauptberichter: Prof. Dr. Cosima Stubenrauch

Mitberichter: Prof. Dr. Michael R. Buchmeiser

Prüfungsvorsitz: Prof. Dr. Elias Klemm

Tag der mündlichen Prüfung: 09.03.2017

Institut für Physikalische Chemie
der Universität Stuttgart

An expert is a man who has made all the mistakes which can be made, in a narrow field.

- Niels Bohr

Acknowledgments

Such a thesis rarely is a *one-man-show* and at this point I want to mention all the people that took part for the success of this work.

First of all I want to thank my supervisor Prof. Dr. Cosima Stubenrauch for giving me the opportunity to do my PhD thesis on such an exciting topic. Thank you for supporting, constantly pushing and encouraging me at all stages of the thesis. I very much appreciate the massive amount of time you took for me regardless of your tight timetable.

I would like to thank Prof. Dr. Michael R. Buchmeiser for being the co-examiner of my thesis. In the same way, I would like to thank Prof. Dr. Elias Klemm for taking the chair during my defense.

Special thanks go to Dr. Wiebke Drenckhan. She helped me in countless ways and it always was a pleasure to discuss with her. I would also like to thank her co-workers Clement Honorez and Thibaut Gaillard for their help in planing and setting-up the microfluidic set-up in Stuttgart. Furhtermore, I would like to thank Prof. Dr. Michael D. Gilchrist for welcoming me at the University College Dublin for the DMTA measurements. I would also like to thank Tatiana Stefanov for helping me all the way through these DMTA measurements in Dublin. I would like to thank Dr. Alexander Fels for helping me with the SEM measurements. A BIG "thank you" go to the chemical technical assistants Diana Zauser and Birgit Feucht for their support regarding the laboratories. Additionally I would like to thank the electronic workshop in person of Boris Tschertsche as well as the mechanical workshop for the competent help whenever necessary.

Thanks to my students Florian Reinhardt, Marian Cors and Christian Köck. It was a pleasure to supervise each of you. I would like to especially thank Florian Reinhardt for the calibration of the microfluidic chips.

I would like to thank my colleagues from the *Stubenrauch group* and *Sottmann group* for creating such a enjoyable working environment. Within these groups I would especially like to thank my office mate Aggi for constant encouragement, fruitful discussions and a lot of fun.

For the counterbalance to the work I would like to thank my team mates from *Red Heat Stuttgart* and especially my flat mates that had to deal with all my moods after work.

Last but definitely not least, I thank my family who supported me all the way to this point. Thank you!

Table of Contents

1	Introduction	1
2	Theoretical Background	6
2.1	Liquid Foams	6
2.1.1	Foaming	6
2.1.2	Structure of Foams	7
2.1.3	Foam Evolution and Decay	9
2.1.4	Foamed Emulsions	13
2.2	Polymer Foams	17
2.2.1	Introduction	17
2.2.2	Polydisperse Polymer Foams	18
2.2.3	Graded Polymer Foams	23
2.2.4	Monodisperse Polymer Foams	27
2.2.5	Mechanical Properties of Polymer Foams	30
2.3	Microfluidics	35
2.3.1	Introduction	35
2.3.2	Bubble Production in Microfluidic Devices	38
3	Generation of Monodisperse Liquid Foams	43
3.1	Microfluidic Chip Calibration	43
3.1.1	Pinch-Off	43
3.1.2	Calibration of the 100 μm Chip	44
3.1.3	Calibration of the 190 μm chip	51
3.2	Generation of Monodisperse Foamed Emulsions	56
4	Polymerization of Monodisperse Liquid Foams	59
4.1	Morphology of Monodisperse Polystyrene Foams	59
4.2	Monodisperse Polystyrene Foams with Different Pore Sizes	66
4.3	Polystyrene Foams with a Pore Size and Density Gradient	69
4.4	Mechanical Properties of Monodisperse Polystyrene Foams	71
4.4.1	Compression	71
4.4.2	Shear	74

5	Conclusion and Outlook	77
5.1	Conclusion	77
5.2	Outlook	81
6	Experimental Section	84
6.1	Materials	84
6.2	Emulsion Formulation and Preparation	84
6.3	Microfluidics and Foaming	85
6.4	Polymerization of Foamed Emulsion	91
6.5	Characterization of Polystyrene Foams	91
7	Appendix	97
7.1	Microfluidic Chips	97
7.1.1	Preliminary Studies	97
7.2	Formulation of the Emulsion	107
7.2.1	FAIRY® as surfactant	107
7.2.2	Emulsions with increased Styrene Content	109
7.2.3	Stability of Foamed Emulsions with varying Styrene Content	110
