To My Parents

Preface

I have written the dissertation while I was a member of the Ph.D.-Program “Applied Microeconomics” jointly organized by the Economic Departments of the Humboldt-Universität zu Berlin and the Freie Universität Berlin. During this period, I obtained financial assistance of the *Deutsche Forschungsgemeinschaft* which is gratefully acknowledged.

I was very fortunate that, even at early stages, I was given the opportunity to present my research ideas in the regular workshops of the graduate program, the Econometrics Seminars of the Humboldt-Universität zu Berlin and the Freie Universität Berlin, and the Macro Brown Bag of the Humboldt-Universität. Thereby, I would like to thank Prof. Michael C. Burda Ph.D., Prof. Dr. Helmut Lütkepohl, Prof. Dr. Peter Kuhbier, Prof. Harald Uhlig Ph.D., and Prof. Dr. Jürgen Wolters for many suggestions. I also appreciate the detailed comments of the dissertation reports written by Professor Wolters and Professor Burda.

Furthermore, I am indebted to my colleagues in the Ph.D.-Program “Applied Microeconomics” and at the Institutes of Statistics and Econometrics of the Humboldt-Universität zu Berlin and the Freie Universität Berlin, not only for contributing to my research project but also for helping me to learn more about advanced microeconomic theory and time series econometrics. Especially, I am indebted to Dipl.-Vw. Oliver Holtemöller for many discussions on the multivariate time series analysis and its computer implementation. I also want to express my gratitude to Dipl.-Vw. Carsten Trenkler who allowed me to use some of his computer programs.

I would like to thank Dipl.-Vw. Ralf Tresch for proof-reading the theoretical analysis and Christiane Inerle M.A. for improving the grammatical style of the manuscript.

The dissertation in this form, however, would not be realized without the help of Professor Wolters. His continuous willingness to evaluate my research ideas has enabled me to finalize the dissertation project within the set time frame.

Finally, I would like to express my deepest gratitude to my parents, Hans-Dieter and Petra Knetsch. Without their example and support, I would not have pursued this career.

Contents

<i>List of Figures</i>	XI
<i>List of Tables</i>	XIII
<i>List of Abbreviations</i>	XV
<i>List of Symbols</i>	XVII
1 Introduction	1
1.1 Three introductory notes	2
1.1.1 On corporatism and collective bargaining	2
1.1.2 On the constancy of relative shares	9
1.1.3 On the identification of empirical labor market models	11
1.2 Overview	17
2 Stylized Facts of Labor Market Time Series	21
2.1 Stochastic processes: Concepts and tests	22
2.1.1 Stationary processes	22
2.1.2 Integrated processes	24
2.1.3 The autocorrelation function	27
2.1.4 Trend- versus difference-stationary processes	30
2.1.5 Unit root tests	31
2.2 Properties of labor market time series	34
2.2.1 The real wage series	36
2.2.2 The labor productivity series	39
2.2.3 The employment series	41
2.2.4 The series of labor's share	45
2.2.5 Testing for breaking trends in the series	53
2.3 Concluding remarks	57
3 The Macroeconomic Model	65
3.1 The structure of the model	66
3.2 The competitive economy	69
3.2.1 The steady-state equilibrium	71
3.2.2 The out-of-steady-state equilibrium	72
3.3 The corporatist economy	75
3.3.1 The objective functions of the bargaining parties	75

3.3.2	Efficient bargains	78
3.3.3	An approximation to the labor market equilibrium . .	81
3.4	Comparison	85
4	The Econometric Analysis	87
4.1	Integration, cointegration, and common trends	89
4.1.1	Stationary and integrated vector processes	90
4.1.2	Cointegration and the Granger representation theorem	92
4.1.3	Stochastic and deterministic cointegration	94
4.1.4	The common trends representation	96
4.2	An empirical model of the labor market	98
4.2.1	Common trends in a corporatist labor market	99
4.2.2	Common trends in a competitive labor market	103
4.2.3	A vector error correction model of the labor market .	107
4.3	A cointegration analysis of the full model	112
4.3.1	Lag order selection	113
4.3.2	Testing for the cointegrating rank	116
4.3.3	Hypothesis testing in the model $H^*(1)$	123
4.3.4	Hypothesis testing in the model $H^*(2)$	125
4.3.5	Model estimation	129
4.4	A cointegration analysis of partial models	136
4.4.1	Exogeneity concepts	137
4.4.2	The conditional vector error correction model	140
4.4.3	The structural interpretation of partial models	141
4.4.4	Statistical inference in partial models	145
4.4.5	A test for weak exogeneity	149
4.4.6	Empirical results	151
5	Conclusion	157
A	Data	163
B	Proofs	183
B.1	Omitted parts of Section 3.2	183
B.2	Proofs of Lemma 3.1 and Lemma 3.2	187
	References	189

List of Figures

2.1	Breaking trend model (Australia, Austria, Belgium)	59
2.2	Breaking trend model (Canada, Denmark, Finland)	60
2.3	Breaking trend model (France, Germany, Greece)	61
2.4	Breaking trend model (Italy, Japan, Netherlands)	62
2.5	Breaking trend model (Norway, Spain, Sweden)	63
2.6	Breaking trend model (Switzerland, UK, USA)	64
A.1	Australia: series and autocorrelation functions	164
A.2	Austria: series and autocorrelation functions	165
A.3	Belgium: series and autocorrelation functions	166
A.4	Canada: series and autocorrelation functions	167
A.5	Denmark: series and autocorrelation functions	168
A.6	Finland: series and autocorrelation functions	169
A.7	France: series and autocorrelation functions	170
A.8	Germany: series and autocorrelation functions	171
A.9	Greece: series and autocorrelation functions	172
A.10	Italy: series and autocorrelation functions	173
A.11	Japan: series and autocorrelation functions	174
A.12	Netherlands: series and autocorrelation functions	175
A.13	Norway: series and autocorrelation functions	176
A.14	Spain: series and autocorrelation functions	177
A.15	Sweden: series and autocorrelation functions	178
A.16	Switzerland: series and autocorrelation functions	179
A.17	United Kingdom: series and autocorrelation functions	180
A.18	United States: series and autocorrelation functions	181

List of Tables

2.1	The data employed	36
2.2	Unit root tests of the real wage series	37
2.3	Unit root tests of the labor productivity series	40
2.4	Unit root tests of the employment series (level)	42
2.5	Unit root tests of the employment series (difference)	43
2.6	Unit root tests of the series of labor's share	46
2.7	ARIMA estimates of real wage	49
2.8	ARIMA estimates of labor productivity	50
2.9	ARIMA estimates of employment	51
2.10	ARIMA estimates of labor's share	52
2.11	Estimated dates of the breakpoint	57
4.1	Variable declaration	99
4.2	Statistical hypotheses in the vector error correction model . .	111
4.3	Series and lag order selection in $y_t = [w_t \ a_t \ l_t]'$	115
4.4	Cointegration tests with restricted trend	121
4.5	Cointegration tests with restricted trend	122
4.6	Hypothesis tests under $H^*(1)$	124
4.7	Hypothesis tests under $H^*(2)$	127
4.8	Cointegrating vectors under $H^*(1)$	130
4.9	Cointegrating vectors under $H^*(1)$ and $H_A(1)$	131
4.10	Cointegrating vectors under $H^*(1)$, $H_A(1)$, and $H_S(1)$	132
4.11	Cointegrating vectors of restricted models under $H^*(2)$	133
4.12	Cointegrating vectors of restricted models under $H^*(2)$	134
4.13	Weak exogeneity tests in the full model	152
4.14	Single-equation cointegrating tests	153
4.15	Estimation of single-equation models	155
5.1	Summary of the results	158
5.2	Corporatism rankings	159

List of Abbreviations

ADF	augmented Dickey/Fuller
AIC	Akaike information criterion
AR	autoregressive
ARIMA	autoregressive integrated moving-average
ARMA	autoregressive moving-average
B&S	BRUNO and SACHS [1985] (in tables)
C&D	CALMFORS and DRIFFILL [1988] (in tables)
DF	Dickey/Fuller
<i>e.g.</i>	for example
<i>et al.</i>	and others
<i>etc.</i>	and so on
GLS	general least squares
HQ	Hannan/Quinn (criterion)
<i>i.e.</i>	that is
KPSS	Kwiatkowski/Phillips/Shin/Schmidt
LM	Lagrange multiplier
LR	likelihood ratio
L&S	LÜTKEPOHL and SAIKKONEN [2000] (in tables)
MA	moving average
OECD	Organization for Economic Co-operation and Development
OLS	ordinary least squares

p.	page
pp.	pages
PP	Phillips/Perron
SC	Schwarz criterion
SVAR	structural vector autoregressive
UK	United Kingdom (in figures and tables)
U.S.	United States of America
USA	United States of America (in figures and tables)
VAR	vector autoregressive
VECM	vector error correction model

List of Symbols

General notational conventions

Within each chapter, a symbol generally has only one meaning. In order to remain in accordance with the usual notation in the corresponding fields, the meaning of symbols changes from one chapter to another. For instance, the Greek letter Π denotes profits in Chapter 3 but the cointegrating matrix in Chapter 4. However, there are some exceptions: The variables W_t , A_t , L_t , and S_t (in logs, w_t , a_t , l_t , and s_t , respectively) indicate real wage, labor productivity, employment, and labor's share throughout the entire study.

In the empirical parts (*i.e.* Chapters 2 and 4 as well as Section 1.1.3), lower case letters generally refer to vectors and scalars, whereas matrices are denoted by upper case letters. Parameter vectors and matrices are mostly denoted by Greek letters.

General mathematical symbols

\lim	limit
\ln	natural logarithm (in text abbreviated by \log)
e	exponential function
$\sqrt{}$	square-root
π	pi
\max	maximum
\inf	infimum
L	lag operator: $L^k x_t \equiv x_{t-k}$
Δ	difference operator: $\Delta^d x_t \equiv x_t - x_{t-d}$
\sum	sum
\prod	product

\int	integral
d	derivative
∂	partial derivative
\times	times
$ \cdot $	absolute value

Matrix operators and special matrices

$\text{rk}(\cdot)$	rank
$\text{sp}(\cdot)$	space
$\text{tr}(\cdot)$	trace
$ \cdot $	determinant
$'$	transposed
\perp	orthogonal complement
I_K	$(K \times K)$ identity matrix

Statistical symbols

$E(\cdot)$	expectation
$\text{Var}(\cdot)$	variance
$\text{Cov}(\cdot)$	covariance
$D(\cdot)$	density
$L(\cdot)$	likelihood
<i>iid.</i>	identical and independently distributed
$N(\mu, \sigma^2)$	Gaussian distributed with mean μ and variance σ^2
$\chi^2(k)$	chi-square distributed with k degrees of freedom
$I(d)$	integrated of order d
$\text{CI}(d, b)$	cointegrated of order d , b
\sim	distributed

Other symbols

$\&$	and
\rightarrow	approaches
\forall	for all
\subseteq	subset
\in	element
$ $	conditional
\mathbb{R}^m	m -dimensional Euclidian space
