To my parents Roswitha and Baldur Gerhart

Acknowledgments

Major parts of this thesis were founded during my research at Aachen University of Technology being an associate in Operations Research. Its completion in the past four years finds me in considerable intellectual and emotional debt to quite a number of people.

My special gratitude goes to my thesis advisor, Professor Hans-Jürgen Zimmermann, who introduced me to the field of uncertainty management and without whose valuable advice, guidance and encouragement this work would not have been possible in this quality. I am grateful for many challenging discussions resulting in new insights and, in particular, for his ongoing strong support after I had decided to leave university early and finish my thesis while pursuing a career in industry.

My thanks also go to Professor Hans-Jürgen Sebastian under whose later disciplinary lead I was given the freedom of research in order to thoroughly examine the various aspects related to my research interests.

Moreover, I thank the professors for introducing me to an international community of scholars. Among others, I thank Professor Erik Antonsson for giving me the opportunity to perform an early study at California Institute of Technology in Pasadena, USA, in 1997 – a study that certainly influenced the direction of my further research. I thank Professor Patrick Bosc for inviting me to his department at École Nationale Supérieure de Sciences Appliquées et de Technologies in Lannion, France, in 2000. He offered me valuable advice and the great opportunity to share some of my thoughts with him.

I thank the Professors Bastian, Steffenhagen and Schröder for joining my thesis committee. My gratitude goes in particular to Professor Michael Bastian who kindly co-advised my thesis.

I have benefited from discussions and collaborative work with many colleagues and friends. Thanks go to my former colleagues at the Department of Operations Research and, moreover, to those from all other departments involved in the interdisciplinary research of the project “Models and Methods for an Integrated Design of Products and Processes” funded by the Deutsche Forschungsgemeinschaft. Our problem discussions influenced my

work in many ways and were often able to give me new impulses. Most importantly, they opened my eyes and understanding to the thoughts and views of many other academic disciplines.

I also thank my friends and many current colleagues who have been supporting and encouraging me to finally complete the doctoral degree.

Last but not least, I am grateful to my parents who have always been supporting me in all phases of my life and whose continuous support is an invaluable contribution to the existence of this work which I dedicate to them.

Volker Gerhart

List of Tables	xiii
List of Figures	xv
List of Abbreviations	xvii
List of Symbols	xix
1 Introduction	1
1.1 Motivation	2
1.2 Related Work	4
1.3 Overview of the Approach	7
1.4 Thesis Outline	13
2 A Paradigm Model of Uncertainty	17
2.1 Uncertainty Phenomenon	18
2.2 Drivers of Uncertainty (Causal Conditions)	21
2.3 Contextual and Intervening Conditions	44
2.4 Strategic Actions and Interactions	71
2.5 Summary	90
3 A Management Framework	95
3.1 Uncertainty Management Process	97
3.2 Flexible Technologies	106

3.3	Climate Orientation	109
3.4	Summary	111
4	Uncertainty in Information Systems	113
4.1	Information Systems	114
4.2	Uncertainty Formalizations	118
4.3	Semantic Proximity of Fuzzy Sets	147
4.4	Summary	167
5	Uncertainty Data Modeling	169
5.1	Data Models	170
5.2	From Null Values to Flexible Queries	179
5.3	Fuzzy Relational Data Models	182
5.4	Uncertainty in Object Data Models	192
5.5	Summary	206
6	Soft Objects in Databases	207
6.1	Identities in Fuzzy Structures	208
6.2	Fuzzy Values and Types	218
6.3	Fuzzy Objects	237
