ACKNOWLEDGEMENTS

This doctoral thesis is the visible outcome of my time as research assistant at the Department of Economics at the University of Düsseldorf and a research trip to the European Commission in Brussels in 2005/2006. I would like to thank all who contributed to the success of this dissertation.

First of all, I am very grateful to my advisor Prof. Dr. Heinz-Dieter Smeets for his ongoing support and helpful suggestions for improvements during various stages of my study. In addition, I strongly benefited from the good environment for research and economic teaching at his chair of economics. Likewise, I thank my second advisor Prof. Dr. H. Jörg Thieme who carefully read through my dissertation after completion and gave valuable comments. I am particularly grateful to him for having given me the opportunity to present some of my earlier work at the research seminar in Radein/Italy in 2002. A special thank you goes to Dr. Martin Hallet of the European Commission in Brussels who familiarized me with the issue of international migrant remittances.

I am very grateful to my colleagues and friends who shared with me the gain and pain of academic research. My work benefited a lot from lively and inspiring discussions with Dr. Katharina Wacker, Dr. Sybille Gerhardt, Prof. Dr. Elmar Schmitz, PD Dr. Albrecht Michler and Dipl.-Kfm. Jens Libuda who also convinced me in due time to switch to L^AT_EX-based word processing. Ms Birgit Knoke provided helpful support and contributed substantially to the good atmosphere at the chair of economics. Moreover, I am very grateful to Dott.sa Chiara Tardivo who provided valuable assistance with the tedious task of proof-reading. Furthermore, a special thank you goes to our former student assistants, notably Dipl.-Kff. Verena Schabbach and Dipl.-Kfm. Alkan Aydin, for providing substantial research assistance.

Above all, I am deeply indebted to my parents for their continuous support and encouragement.

CONTENTS

<i>List of Tables</i>	IX
<i>List of Figures</i>	XI
<i>List of Abbreviations</i>	XIII
<i>List of Symbols</i>	XVI
<i>1. Introduction</i>	1
<i>2. The Evolution of Capital Flows to Emerging Market Economies: Booms and Busts</i>	7
2.1 The Emergence of World Financial Markets	8
2.1.1 Aggregate Saving, Investment and Capital Flows to EMEs	9
2.1.2 Recent Current Account Surpluses in EMEs and Trends in Global Imbalances	11
2.2 Changing Patterns of Capital Flows to EMEs	15
2.2.1 Evolution of International Debt Finance	18
2.2.1.1 International Bank Lending	18
2.2.1.2 International Bond Finance	22
2.2.2 Shifting Forms of Equity Finance	27
2.2.2.1 Trends in Portfolio Equity	27
2.2.2.2 Foreign Direct Investment	34
2.2.3 Derivative Securities	38
2.2.4 International Migrant Remittances	41
<i>3. The Investment Environment in Emerging Market Economies: Institutional Quality and Economic Policies</i>	45
3.1 Corruption and Legal Foundations	47
3.1.1 Corruption and Crony Capitalism	49
3.1.2 Investor Protection: Shareholder and Creditor Rights	52

SUR	Seemingly Unrelated Regression
WACC	Weighted Average Cost of Capital
WBI	World Bank Institute
WEO	World Economic Outlook (IMF)

LIST OF SYMBOLS

A	Real assets
a	Monitoring cost
α	Share of the firm
AP	Asset price
B	Foreign assets
BC	Bankruptcy costs
b	Borrowing
β	Discount factor
C, c_i	Private consumption
C^F	Costs
CA	Current account balance
CF	Cash flow
D	Debt
D^D	Deposits
d_t	Debt-service obligations
d_t^p	Debt-service payments
δ	Depreciation
E	Equity
$E(.)$	Expectations operator
e	Exchange rate
ϵ	Productivity shock; stochastic error term
EX	Exports
F	Finance volume
$F(.)$	Production function
FE	Foreign exchange reserves
FS	Financial slack
G	Government expenditure
G_D	Gains from leverage
g	Rescheduling cost
γ	Reorganization costs
γ_A	Efficiency loss due to asymmetric information

I	Investment
IM	Imports
K	Capital (stock)
K^D	Demand of capital
K^S	Supply of capital
k	First-period investment
k^{CG}	Degree of corporate governance
KA	Capital account balance
k_g	Reorganization costs if operations are resumed
k_q	Reorganization costs if operations are quit
L	Loans, Liquidity
l	Liquidation return
λ	Probability of a liquidity shock
M	Money supply
N	Number of firms
NAP	Net asset position
NFA	Net foreign assets
NFL	Net foreign liabilities
NPL	Non-performing loans
NPV	Net present value
NX	Net exports
ν	Probability of a high output Y_H in $t = 2$
P	Price level
p	Inflation rate
PV_{FD}	Present value of future costs due to bankruptcy
PV_{Tax}	Present value of future tax saved
Π	Nominal profits
π	Probability
$\Phi(\cdot)$	Cumulative distribution function
$\phi(\cdot)$	Density function
ψ	Penalty fee (cost of fund appropriation)
Q	Claim
q	Costs of closing and quitting operations
R	Foreign exchange reserves
r	Domestic interest rate
r^*	World interest rate
r_A	Weighted average cost of capital (WACC)
r_D	Cost of debt

r_E	Cost of equity
ρ	Intermediation costs
ρ_E^S	Discount rate for an all-equity firm
S	Gross national saving
σ	Variance
T'	Net tax saving per US-dollar of interest paid
t'	Marginal corporate tax rate
θ	Proportionality factor
τ_C	Corporate tax rate
τ_{PB}	Personal income tax rate
$U(.)$	Utility function
V	Total value of the firm; value function; market price
v	Asset return,
W, w	Net worth, wealth
X	Pay off
Y	Retained earnings; national income; output
y	Growth rate of output; yield
Y_M	Earnings appropriated by manager
Z^g	Amount paid in good state
Z^b	Amount paid in bad state
