Technische Universität München

Multicarrier Systems Based on Filter Banks

Dirk S. Waldhauser

Vollständiger Abdruck der von der Fakultät für Elektrotechnik und Informationstechnik der Technischen Universität München zur Erlangung des akademischen Grades eines

Doktor-Ingenieurs

genehmigten Dissertation.

Vorsitzender: Univ.-Prof. Dr.-Ing. K. Diepold

Prüfer der Dissertation:

1. Univ.-Prof. Dr. techn. J. A. Nossek
2. Prof. M. Bellanger, Conservatoire National
des Arts et Métiers, Paris / Frankreich

Die Dissertation wurde am 03.12.2008 bei der Technischen Universität München eingereicht und durch die Fakultät für Elektrotechnik und Informationstechnik am 06.07.2009 angenommen.

Acknowledgments

This work is the result of my research activities at the Institute for Circuit Theory and Signal Processing at the Technische Universität München.

I would like to thank Prof. Dr. techn. Josef A. Nossek for continuously supporting me on that way with remarkable enthusiasm, many valuable ideas, questions, comments and pieces of advice. Besides many technical and scientific discussions I will also keep our tennis matches in good memory. I would also like to thank Prof. Maurice Bellanger from CNAM, Paris, for reviewing this thesis and coming to Munich for my oral examination and Prof. Dr.-Ing. Klaus Diepold for serving as the chairman of my dissertation committee in a very kind and uncomplicated manner. Let me thank Prof. Yih-Fang Huang who has drawn my attention to the set-membership variant of the LMS algorithm.

Furthermore, I would like to express my thanks to all the present and former academic and non-academic staff of the institute for the pleasant atmosphere and the great time we have spent together. Especially, I am very grateful to my colleagues and friends Dr. Guido Dietl, Dr. Christoph Saas, Dr. Artur and Dr. Marek Wróblewski, and Leonardo Gomes Baltar for their reliable support and fruitful discussions throughout good times and bad times and various aspects of research and real life. Thanks to Leonardo and Sergey Fedorov I have learned a lot about the Brazilian and Russian way of thinking and living. Furthermore, I have really profited from working together in the group with Dr. Benno Zerlin, Dr. Michel Ivrlač, Mario Castañeda, Amine Mezghani and Hans H. Brunner and from collaborating with several students not mentioned explicitly.

I owe sincere gratitude to my wife Ine who has always supported me with her love, prudence and patience. Let me also thank my parents-in-law who have always taken care of me with first-class wines from their cellar and the best gourmet cuisine I have ever experienced.

I am deeply grateful to my parents for their steady commitment and for giving me the opportunity to spend an untroubled time and fulfill my dreams and desires.

Munich, July 2009

Dirk S. Waldhauser

Contents

1	Introduction	13
1.1	Historical Review	13
1.2	Current Standards Based on Multicarrier Modulation	15
1.3	Contribution and Outline	15
1.4	Notation	17
2	Aspects of Multicarrier Systems	21
2.1	Orthogonal Multiplexing of Subcarriers	21
2.1.1	Orthogonally Multiplexed QAM Multicarrier System . . .	23
2.1.2	Oversampled QAM Multicarrier System	30
2.2	Structure Equivalences of Multicarrier Systems	34
2.2.1	Multicarrier Systems with Even Subcarrier Stacking . . .	36
2.2.2	Multicarrier Systems with Odd Subcarrier Stacking . . .	37
2.2.3	Equivalence of Exponentially Modulated FBMC Systems	39
2.3	Spectral Efficiency of Multicarrier Systems	43
2.3.1	Power Spectral Density of Multicarrier Systems	45
2.3.2	Power Spectral Density of OFDM Modulation	49
2.3.3	Power Spectral Density of RRC Multicarrier Modulation .	57
2.3.4	Comparison of FBMC and OFDM	62
2.4	Peak-to-Average Power Ratio	65
3	Implementation of Filter Bank Based Multicarrier Systems	69
3.1	Efficient Structure of an O-QAM Filter Bank	69
3.1.1	Efficient Implementation of the Transmit Filter Bank . .	70
3.1.2	Efficient Implementation of the Receive Filter Bank . . .	74
3.2	Prototype Filter Design	82
3.2.1	Perfect Reconstruction Filter Banks	82
3.2.2	Nearly Perfect Reconstruction Filter Banks	90
