Acknowledgements

I worked on this dissertation during my three-year employment in the Chair of Sensor Technology (LSE) at the University of Erlangen-Nuremberg, Germany. Here I would like to express my sincere gratitude to all those who provided inspiration and counsel for my thesis in these years.

First of all, I want to thank my supervisor, Prof. Dr. Reinhard Lerch, for his scholarly advice and valuable guidance. Especially appreciated is his encouragement, which kept me on course when in doubt. I would also like to thank for the comfortable working environment he established at our department.

I am further grateful to Prof. Dr. Bernhard G. Zagar who agreed to be the second assessor of this thesis without hesitation, and thank for his constructive comments and excellent advice.

Dr. Stefan J. Rupitsch has been my mentor, colleague and friend. His guidance made the work of the last three years an interesting and rewarding journey. His help was not restricted to the academic sphere. As a matter of fact, his advice on communication skills was particularly appreciated.

I greatly appreciate the help of Manfred Pelz for his support in constructing components for measurements. Thanks are due for his excellent work, which made the control of error sources simple. Because of this, accurate measurements of LRT have been successfully accomplished.

Moreover, I would like to thank Jens Grabinger, who provided consistent support in the field of numerical simulations, as well as Felix Wolf and Michael Löffler, who had come up with the idea of minimizing the placement errors with the aid of a laser beam. I also want to thank Martin Meiler, who offered me the opportunity of applying LRT to the investigation of a high-intensity ultrasound device, and his help in obtaining the permission of publishing the corresponding measurement results.

In the end, I gratefully acknowledge funding of the Erlangen Graduate School in Advanced Optical Technologies (SAOT) by the German Research Foundation (DFG) in the framework of the German excellence initiative.

Erlangen, December 2013 Lizhuo Chen

Notations and Abbreviations vii

Abstract ix

Kurzfassung xi

1 Introduction 1
- 1.1 Motivation . . . 1
- 1.2 State of the Art . . . 2
- 1.3 Overview of the Work . . . 4
- 1.4 Outline of the Thesis . . . 7

2 Measurement Fundamentals 9
- 2.1 Measurement Principle . . . 9
  - 2.1.1 Sound Pressure in Fluids . . . 10
  - 2.1.2 Dilatation in Solids . . . 10
- 2.2 Laser Doppler Vibrometer . . . 11
- 2.3 Tomographic Imaging . . . 13
  - 2.3.1 Fourier Slice Theorem . . . 13
  - 2.3.2 Reconstruction for Parallel Projections . . . 15
- 2.4 Interim Summary . . . 16

3 Design of LRT Measurements 17
- 3.1 Experimental Setup . . . 17
- 3.2 Choice of Measurement Parameters . . . 19
  - 3.2.1 Theoretical Determination of Measurement Parameters . . . 19
  - 3.2.2 Optimization of Measurement Parameters . . . 21
- 3.3 Control of Measurement Errors . . . 25
  - 3.3.1 Placement Errors . . . 25
  - 3.3.2 Optical Errors . . . 29
- 3.4 Measurable Frequency Range . . . 32
- 3.5 Interim Summary . . . 36

4 Ultrasound Pressure Fields in Water 37
- 4.1 Piston-type Transducer . . . 37
- 4.2 Cylindrically Focused Transducer . . . 41
- 4.3 Acceleration of Measurement Process . . . 42
  - 4.3.1 Reduction of the Number of Projections . . . 43
  - 4.3.2 LRT Measurements under the Axisymmetric Assumption . . . 44
  - 4.3.3 Three-dimensional Reconstruction of a Pressure Field . . . 48

4.4 Reconstruction of a Disturbed Pressure Field 50
4.4.1 Numerical Simulation 50
4.4.2 Experiment and Results 50
4.5 Interim Summary 57

5 Ultrasound Pressure Fields in Air **59**
5.1 Experimental Setup 59
5.2 Calculation of Piezo-optic Coefficient in Air 60
5.3 Experimental Results 62
5.4 Interim Summary 64

6 Ultrasound Fields in PMMA **67**
6.1 Normal Stress in Isotropic Solids 67
6.2 Experimental Results 71
6.2.1 Ultrasound Fields Arising from Different Transducers 71
6.2.2 Ultrasound Fields throughout Water and PMMA 74
6.3 Interim Summary 80

7 High-intensity Ultrasound in Water **83**
7.1 Experimental Setup 83
7.2 Measurement Results 84
7.2.1 Frequency Distribution 84
7.2.2 Repeatability 89
7.2.3 Reconstruction and Visualization 90
7.3 Interim Summary 96

8 Conclusion and Outlook **97**
8.1 Conclusion 97
8.2 Outlook 100
