

Efficient Detection and Adaptive Transmission for MIMO-OFDM Systems

Dissertation

zur Erlangung des akademischen Grades

Doktor der Ingenieurwissenschaften (Dr.-Ing.)

vorgelegt dem Fachbereich 1 (Physik/Elektrotechnik)

der Universität Bremen

von

Dipl.-Ing. Ronald Böhnke

Tag des öffentlichen Kolloquiums: 25.08.2014

Gutachter der Dissertation: Prof. Dr.-Ing. K.-D. Kammeyer

Prof. Dr. sc. techn. G. Kramer

Weitere Prüfer:

Prof. Dr. rer. nat. C. Görg

Prof. Dr.-Ing. R. Laur

Germering, Februar 2015

Acknowledgements

This thesis is mainly based on my research work at the Department of Communications Engineering at the University of Bremen, which was funded by the German Research Foundation and the Federal Ministry of Education and Research.

I am particularly indebted to my supervisor Prof. Karl-Dirk Kammeyer for providing a great working atmosphere and his enduring support. I would also like to express my sincere gratitude to my second supervisor Prof. Gerhard Kramer for his interest in my work and the opportunity to join his institute at the Technical University of Munich. Further thanks go to Prof. Carmelita Görg and Prof. Rainer Laur, who served as examiners.

I want to thank all my friends and former colleagues at the Department of Communications Engineering for the pleasant time and many inspiring discussions – both technical and non-technical. Special thanks go to Dr. Dirk Wübben and Prof. Volker Kühn for the superb and successful collaboration. I would also like to acknowledge the contributions of my office mate Dr. Ansgar Scherb as well as Dr. Mark Petermann, Dr. Carsten Bockelmann, Dr. Peter Klenner, and Dr. Henning Paul. I am grateful to Prof. Holger Boche and Prof. Eduard Jorswieck, who introduced the fundamentals of multi-user information theory to me during a research visit at the Fraunhofer Heinrich Hertz Institute in Berlin. Furthermore, I would like to thank Prof. Christoph Günther and all the nice colleagues at the Institute for Communications and Navigation as well as the Institute for Communications Engineering at the Technical University of Munich.

Very special thanks are due to my parents Dieter and Ursel Böhnke for their endless support. Last but not least, the biggest thank you goes to my wife Dr. Petra Weitkemper for proof-reading the manuscript – and bearing with me in good and bad times.

Contents

1	Introduction	1
2	System Model and Basics	5
2.1	MIMO-OFDM Transmission	6
2.1.1	Orthogonal Frequency Division Multiplexing	6
2.1.2	Extension to Multiple Antennas	10
2.1.3	Power Constraints and Normalizations	11
2.2	Characterization of the Channel	13
2.2.1	Physical Channel Model	14
2.2.2	Stochastic Channel Model	17
2.2.3	Channel Estimation and Prediction	21
2.3	Transmitter and Receiver Components	25
2.3.1	Channel Coding	26
2.3.2	Symbol Mapping	40
2.3.3	Precoding and Detection	50
2.4	Summary	53
3	Nonadaptive Transmission	55
3.1	Channel Capacity	56
3.1.1	Ergodic Capacity	59
3.1.2	Outage Probability	63
3.1.3	Diversity and Multiplexing	65
3.2	Transmit Strategies	67
3.2.1	Transmit Diversity Schemes	68
3.2.2	Spatial Multiplexing Schemes	73

3.2.3	Combined Schemes	74
3.3	Detection Algorithms	77
3.3.1	Linear Equalization	79
3.3.2	Successive Interference Cancellation	90
3.3.3	Tree Search Strategies	104
3.3.4	Further Detection Algorithms	113
3.3.5	Iterative Detection	117
3.4	Performance Comparison	122
3.4.1	Simulation Results	122
3.4.2	Discussion	127
3.5	Summary	128
4	Adaptive Transmission	133
4.1	Channel Capacity	134
4.1.1	Ergodic Capacity	137
4.1.2	Outage Probability	139
4.2	Link Adaptation for Parallel Channels	141
4.2.1	Uncoded Transmission	141
4.2.2	Coded Transmission	145
4.2.3	Performance Comparison	149
4.3	Low-Rate Feedback Link	152
4.3.1	Linear Equalization	153
4.3.2	Successive Interference Cancellation	158
4.3.3	Iterative Detection	162
4.4	Adaptive Precoding	164
4.4.1	Linear Precoding	164
4.4.2	Dirty Paper Coding	167
4.4.3	Vector Precoding	170
4.4.4	Performance Comparison	178
4.5	Multi-User Systems	181
4.5.1	Multiple Access Schemes	181
4.5.2	Achievable Rate Regions	183
4.5.3	Weighted Sum Rate Maximization	186
4.6	Summary	195
5	Conclusion	199

Notation and Acronyms	205
