

Robust Numerical Prediction of Offshore Pile Driving Noise over Long Ranges

Vom Promotionsausschuss der
Technischen Universität Hamburg-Harburg

zur Erlangung des akademischen Grades

Doktor-Ingenieur (Dr.-Ing.)

genehmigte Dissertation

von

Tristan Gerhard Lippert

aus

Celle

2015

1. Gutachter:

Prof. Dr.-Ing. Otto von Estorff

2. Gutachter:

Prof. Dr.-Ing. Jürgen Grabe

Tag der mündlichen Prüfung:

18.12.2015

Schriftenreihe des Instituts für
Modellierung und Berechnung der
Technischen Universität Hamburg-Harburg

Band 18

Contents

Nomenclature	v
1 Introduction	1
1.1 Motivation	2
1.2 State of the art	3
1.3 Scope and approach	4
2 Mathematical background	7
2.1 The wave equation and the Helmholtz equation	7
2.1.1 Derivation of the wave equation	7
2.1.2 Derivation of the Helmholtz equation	9
2.1.3 Analytic solution of the Helmholtz equation	10
2.2 Integral representation of the solution for a layered media waveguide	12
2.3 Numerical evaluation of wave and Helmholtz equation in underwater acoustics	17
2.3.1 Discretization methods	17
2.3.2 Underwater acoustic propagation methods	19
2.4 Wavenumber integration technique	23
2.4.1 Numerical evaluation of the depth-dependent Greens function	24
2.4.2 Numerical evaluation of the inverse Hankel transformation	27
2.4.3 Transformation to the time-domain	29
2.4.4 Sound propagation in the sea	32
3 Modelling of pile driving noise over long ranges	33
3.1 Radiation characteristics of offshore pile driving	33
3.1.1 Impulse propagation within the pile	33
3.1.2 Acoustic radiation of pile driving	34
3.2 Modelling of close range pile driving noise as input data	35
3.3 Far field modelling of pile driving noise by wavenumber integration	36
3.4 Major influencing factors for propagation modelling	38
3.4.1 The acoustic properties of sea water	38

3.4.2	Consideration of different sound speed profiles	39
3.4.3	Modelling of the air-water interface	40
3.4.4	Modelling of the sea floor	42
3.5	Analytic estimation of far field pile driving noise	52
4	Verification and validation	55
4.1	A verification example	55
4.2	The validation cases and their according measurements	61
4.2.1	Spatial and temporal deviation of measurements	62
4.2.2	BARD Offshore 1: Description of the measurement	65
4.2.3	BARD Offshore 1: Validation	66
4.2.4	GlobalTech I: Description of the measurement	68
4.2.5	GlobalTech I: Validation	68
4.2.6	Borkum Riffgrund 1: Description of the measurement	70
4.2.7	Borkum Riffgrund 1: Validation	71
4.2.8	Anholt: Description of the measurement	72
4.2.9	Anholt: Validation	73
4.3	Conclusions	75
5	Analytic estimation of pile driving noise levels	77
5.1	Discussion of the decay laws for pile driving acoustics	78
5.1.1	Discussion of cylindrical spreading term $10 \log_{10}(r)$	79
5.1.2	Discussion of linear loss term αr	80
5.2	Numerical investigation of the loss factor α	81
5.2.1	Investigation of the assumed dependencies	83
5.2.2	Estimation of the loss factor α	83
5.3	Verification and validation of analytic decay laws	84
5.3.1	Verification	85
5.3.2	Validation with offshore measurements	86
5.4	Conclusions	88
6	Empirical estimation of the SPL_{peak} based on the SEL	91
6.1	Application of the regression approach to pile driving noise measurements	92
6.2	Application of the regression approach to pile driving simulation results	93
6.3	Extension of the regression approach for pile driving acoustics	94
6.4	Application of the extended regression approach	97
6.5	Conclusions	97

7	Uncertainty analysis for pile driving noise	99
7.1	Uncertainty of time-varying factors	100
7.2	Uncertainties of constant waveguide properties	103
7.2.1	Influence of different soil modelling approaches	104
7.2.2	Chosen quantification approach	104
7.2.3	Sensitivity study	108
7.3	Estimation of confidence intervals for the described approach	110
7.3.1	Measurement variation and MC simulations for Anholt	111
7.3.2	Measurement variation and MC simulations for BO1	113
7.3.3	Measurement variation and MC simulations for GTI	116
7.3.4	Measurement variation and MC simulations BR1	117
7.3.5	Conclusions	118
8	Conclusions and outlook	121
8.1	Conclusions	121
8.2	Outlook	123
	Bibliography	125
A	Appendix	A.1
A.1	Hankel transformation	A.1
A.2	Axis-symmetric Helmholtz equation in the wavenumber domain	A.2
A.3	Wavenumber integration for elastic Layers	A.4
