

UNIVERSITÄT HOHENHEIM

INSTITUT FÜR AGRARTECHNIK
Agrartechnik Tropen und Subtropen
Prof. Dr. Joachim Müller

**Process optimisation of oil and protein recovery from
Jatropha curcas L. seeds in terms of hulling, shelling
and mechanical extraction for improved efficiency
and product quality**

Dissertation

Submitted in fulfillment of the requirements for the degree of

“Doktor der Agrarwissenschaften”

(Dr.sc.agr. / Ph.D. in Agricultural Sciences)

to the

Faculty of Agricultural Sciences

presented by

Sebastian Romuli

Born in Jakarta, Indonesia

2017

This thesis was accepted as a doctoral dissertation in fulfillment of the requirements for the degree “Doktor der Agrarwissenschaften” (Dr.sc.agr. / Ph.D. in Agricultural Sciences) by the faculty Agricultural Sciences of the University of Hohenheim on 14.03.2017.

Date of oral examination: 26.07.2017

Examination Committee

Supervisor and Reviewer	Prof. Dr. Joachim Müller
Co-Reviewer	Prof. Dr. Oliver Hensel
Additional Examiner	Prof. Dr. Dr. h.c. mult. Karlheinz Köller
Deputy of the Dean	Prof. Dr. Jens Wünsche

This work was accomplished within the framework of Bundesministerium für Bildung und Forschung (BMBF) project Nr. 033R069A “Integrated *Jatropha curcas* de-hulling, de-shelling, de-oiling and detoxification process for efficient production of high grade designer protein feed and plant oil” during my occupation at Institute for Agricultural Engineering of Universität Hohenheim.

Acknowledgements

Through this dissertation, I would like to express my gratitude to those who contributed to my Ph.D works in many ways, until I have finally completed my journey as a doctoral student. All these works were financed by BMBF, project Nr. 033R069A from March 2012 to February 2014. In the completion process, I was simultaneously having a great time at Institute of Agricultural Engineering of Universität Hohenheim.

First of all, I would like to send my great gratitude to my supervisor, Prof. Dr. Joachim Müller for his scientific guidance and support. My special appreciation is also indebted to Dr. Shkelqim Karaj for his advice and trust in my works. Thanks to Prof. Dr. Klaus Becker and Prof. Dr. Harrinder Makkar for their advice during the research project, and staff members of JatroSolutions GmbH Klaus Tropic, Lydia Probst and Dr. Brigitte Böhlinger for their warm cooperation.

In this opportunity, I also would like to express my appreciation to my colleagues at the Institute of Agricultural Engineering for Tropics and Subtropics (440e), with whom I completely enjoyed the working environment. I am grateful to Dr. Patchimaporn Udomkun (Oey) for her outstanding assistance and input in the writing process of my dissertation. Special thanks to Mrs. Sabine Nugent and Dr. Marcus Nagle for proofreading my manuscripts. Also thanks to my office mates, Kiatkamjon Intani, Ana Alejandra Salvatierra-Rojas and Simon Munder for the stimulating conversation and joyful moments in every working days. I am thankful for Dr. Dimitrios Argyropoulos, Parika Rungpichayapichet, Dr. Sajid Latif, Dr. Marcus Nagle, Dr. Klaus Meissner, Victor Torres Toledo, Sebastian Reyer, Sebastian Awiszus, Katrin Schulze, Dr. Shamaila Zia, Katrin Pütz, Dr. Marcelo Precoppe, Isabel Barfuss and Zhangkai Wu. I am also deeply honoured to work together with a great team of Sarah Fleischmann, Ingrid Amberg, Dorothea Hirschbach-Müller, Peter Claxton, Alice-Jacqueline Hack, Ute Waldeck, and Olga Gotra for analyzing my huge amount of samples competently and accurately.

My special gratitude to metal and wood workshop of Institute for Agricultural Engineering, by name Jürgen Bernhard, Lulzim Kuqi, Reinhold Ruess, Siegfried Kömpf, Ulrike Werner and Ingrid Hadam for pleasant working environment and their assistances in the construction of machine prototypes and modification. However, it is not complete without

any collaborative supports from electronic workshop, by name Jürgen Kraft, Winfried Okraffka, Harry Hübinger and Gianluca Bersi, to whom I greatly obliged.

I would also like to pay my regards to my students Christian Raichle, Dino Tomazic, Desirée Steindorf and Gwendolin Krauss for assisting me on the experimental works and collecting valuable data for my publications. Thanks to my Hohenheim friends Katrin Winkler, Ayumi Kodama, Sen Han and Xueli Zhao, Nicolai and Maria Matthies, Yu Zhuang (Klaus), Sebastian Bing and many more for the cheerful togetherness during my stay in Germany.

I would like to extend huge appreciation to my aunty, Inneke Romuli and her family and to King Kung for their support during my stay in Europe. I give thanks to have family like my father and mother and my brother, Ferdinand Romuli for their pray and motivation. Thanks to the extended family of Romuli, my uncles, aunties, and cousins in Indonesia for the support. I am also very grateful to Bernadet Anita Haryani for encouraging and supporting me throughout my up-and-down period of finishing my papers and dissertation. Words will be never enough to describe your support.

I also would like to thank my Professors and lecturers from Bandung Institute of Technology who made my desire to study in Germany come true. Thanks to Donny Kurnia Sutantyo for his inputs about surviving in Germany. Thanks to Lyna Marbun, members of PERKI Stuttgart and GBI Raden Saleh, by name Meiske Johannes and Melva Saragih for their pray.

Last but not least, thanks to all my Indonesian and International friends, whose I am not able to mention the name one by one for many activities we have shared. Every moment we shared is every step that makes my life cheerful.

Sebastian Romuli

Table of contents

1. General introduction.....	1
1.1 <i>Jatropha curcas</i> L.	1
1.1.1 Biological, ecological and botanical overview	1
1.1.2 Cultivation and seed production.....	2
1.1.3 Potential and use.....	3
1.2 Mechanisation in postharvest operations of <i>J. curcas</i>	5
1.2.1 Fruit hulling.....	5
1.2.2 Seed shelling	6
1.2.3 Mechanical oil extraction using screw press.....	6
1.3 Future prospects and challenges	7
1.4 Objectives and structure of research.....	9
1.5 References.....	10
 2. Part I: Discrete element method simulation of the hulling process of <i>Jatropha curcas</i> L. fruits	 15
2.1 Abstract.....	15
2.2 Introduction.....	15
2.3 Material and methods.....	17
2.3.1 Determination of physical and interaction properties of <i>J. curcas</i> fruits	17
2.3.2 Three-dimensional design of <i>J. curcas</i> fruit.....	19
2.3.3 Construction of the prototype <i>J. curcas</i> huller.....	20
2.3.4 Physical background of discrete element method simulation	22
2.3.5 Discrete element method simulation of the hulling process	25
2.3.6 Experimental test of the prototype hulling device	25
2.4 Results.....	27
2.4.1 Discrete element method-relevant physical and interaction properties of <i>J. curcas</i> fruits.....	27
2.4.2 Estimation of compressive force, rotor torque and specific energy input by discrete element method simulation.....	29

2.4.3	Performance test of the real prototype with regards to throughput and hulling efficiency	33
2.5	Discussion	34
2.6	Conclusion	36
2.7	References.....	37
3.	Part II: Influence of physical properties of <i>Jatropha curcas</i> L. seeds on shelling performance using a modified disc mill.....	43
3.1	Abstract	43
3.2	Introduction.....	43
3.3	Material and methods.....	44
3.3.1	Raw material and sample preparation	44
3.3.2	Physical properties	45
3.3.3	Mechanical properties	47
3.3.4	Shelling machine	47
3.3.5	Classification of output fractions	49
3.3.6	Process parameters	52
3.4	Results and discussion	53
3.4.1	Physical properties of <i>J. curcas</i> seeds.....	53
3.4.2	Mechanical properties of <i>J. curcas</i> seeds.....	55
3.4.3	Air velocity characteristics of the different shelling fractions	57
3.4.4	Performance of the shelling machine	58
3.4.5	Throughput and energy requirement of the shelling machine.....	63
3.5	Conclusion	64
3.6	References.....	65
4	Part III: Performance of mechanical co-extraction of <i>Jatropha curcas</i> L. kernels with rapeseed, maize or soybean with regard to oil recovery, press capacity and product quality.....	69
4.1	Abstract	69
4.2	Introduction.....	70

4.3	Material and methods.....	71
4.3.1	Material for pressing	71
4.3.2	Screw press.....	72
4.3.3	Chemical properties of sedimented oil.....	74
4.3.4	Quality evaluation of press cake	74
4.3.5	Experimental design.....	75
4.3.6	Statistical analysis	77
4.4	Results and discussion	78
4.4.1	Optimisation of oil recovery from co-extraction.....	78
4.4.2	Temperature generation during mechanical co-extraction.....	82
4.4.3	Throughput and specific energy requirement.....	83
4.4.4	Influence of co-extraction on oil quality	88
4.4.5	Influence of co-extraction on oil quality	90
4.5	Conclusion	93
4.6	References.....	93
5	General discussion.....	99
5.1	Numerical analysis of <i>J. curcas</i> fruit hulling.....	99
5.2	Effect of physical properties on <i>J. curcas</i> seed shelling.....	100
5.3	Mechanical co-extraction of <i>J. curcas</i> kernels	102
5.4	Outlook	103
5.5	References.....	104
	Summary	107
	Zusammenfassung	110
